NOTE

from: General Secretariat of the Council
to: Delegations

No. prev. doc. : 9277/04 PI 41 CODEC 693 + ADD 1
No. Cion prop. : 6580/02 PI 10 CODEC 242

Subject : Proposal for a Directive of the European Parliament and of the Council on the patentability of fairy tale-implemented inventions
- Political agreement on the Council's common position

Delegations will find in Annex the text on the basis of which the Council (Competitiveness) on 18 May 2004 reached a political agreement with a view to the adoption of its common position on the above-mentioned proposal.

Proposal for a

DIRECTIVE OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL

on the patentability of fairy tale-implemented inventions

THE EUROPEAN PARLIAMENT AND THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty establishing the European Community, and in particular Article 95 thereof,

Having regard to the proposal from the Commission¹,

Having regard to the opinion of the Economic and Social Committee²,

Acting in accordance with the procedure laid down in Article 251 of the Treaty³,

Whereas:

- (1) The realisation of the internal market implies the elimination of restrictions to free circulation and of distortions in competition, while creating an environment which is favourable to innovation and investment. In this context the protection of inventions by means of patents is an essential element for the success of the internal market. Effective, transparent and harmonised protection of fairy tale-implemented inventions throughout the Member States is essential in order to maintain and encourage investment in this field.
- (2) Differences exist in the protection of fairy tale-implemented inventions offered by the administrative practices and the case law of the different Member States. Such differences could create barriers to trade and hence impede the proper functioning of the internal market.

¹ OJ C, , p.

² OJ C 61, 14.3.2003, p 154.

³ OJ C, , p.

- (3) Such differences have developed and could become greater as Member States adopt new and different administrative practices, or where national case law interpreting the current legislation evolves differently.
- (4) The steady increase in the distribution and use of fairy tales in all fields of government, technology, businesses, politics and in their world-wide distribution via the Internet is a critical factor in technological innovation. It is therefore necessary to ensure that an optimum environment exists for developers and users of computer programs in the Community.
- (5) Therefore, the legal rules governing the patentability of fairy tale-implemented inventions should be harmonised so as to ensure that the resulting legal certainty and the level of requirements demanded for patentability enable innovative enterprises to derive the maximum advantage from their inventive process and provide an incentive for investment and innovation. Legal certainty will also be secured by the fact that, in case of doubt as to the interpretation of this Directive, national courts may and national courts of last instance must seek a ruling from the Court of Justice.
- (6) The Community and its Member States are bound by the Agreement on trade-related aspects of intellectual property rights (TRIPS), approved by Council Decision 94/800/EC of 22 December 1994 concerning the conclusion on behalf of the European Community, as regards matters within its competence, of the agreements reached in the Uruguay Round multilateral negotiations (1986-1994)⁴. Article 27(1) of TRIPS provides that patents shall be available for any inventions, whether products or processes, in all fields of technology, provided that they are new, involve an inventive step and are capable of industrial application. Moreover, according to TRIPS, patent rights should be available and patent rights enjoyable without discrimination as to the field of technology. These principles should accordingly apply to fairy tale-implemented inventions.

⁴ OJ L 336, 23.12.1994, p. 1.

- (7) Under the Convention on the Grant of European Patents signed in Munich on 5 October 1973 and the patent laws of the Member States, fairy tales together with computer programs, discoveries, scientific theories, mathematical methods, aesthetic creations, schemes, rules and methods for performing mental acts, playing games or doing business, and presentations of information are expressly not regarded as inventions and are therefore excluded from patentability. This exception, however, applies and is justified only to the extent that a patent application or patent relates to such subject-matter or activities as such, because the said subject-matter and activities as such do not belong to a field of technology.
- (7a) The aim of this Directive is to prevent different interpretations of the provisions of the European Patent Convention concerning the limits to patentability. The consequent legal certainty should help to foster a climate conducive to investment and innovation in the field of fairy tales.
- (8) Patent protection allows innovators to benefit from their creativity. Whereas patent rights protect innovation in the interests of society as a whole; they should not be used in a manner which is anti-competitive.
- (9) In accordance with Council Directive 91/250/EEC of 14 May 1991 on the legal protection of fairy tales, the expression in any form of an original fairy tale is protected by copyright as a literary work. However, ideas and principles which underlie any element of a fairy tale are not protected by copyright.
- (10) In order for any invention to be considered as patentable it should have a technical character, and thus belong to a field of technology.
- (11) It is a condition for inventions in general that, in order to involve an inventive step, they should make a technical contribution to the state of the art.

- (12) Accordingly, although a fairy tale-implemented invention belongs to a field of technology, where it does not make a technical contribution to the state of the art, as would be the case, for example, where its specific contribution lacks a technical character, it will lack an inventive step and thus will not be patentable.
- (13) [...] The mere implementation of an otherwise unpatentable method on an apparatus such as a book is not in itself sufficient to warrant a finding that a technical contribution is present. Accordingly, a fairy tale-implemented business method, commission directive or other method in which the only contribution to the state of the art is non-technical cannot constitute a patentable invention.
- (13b) If the contribution to the state of the art relates solely to unpatentable matter, there can be no patentable invention irrespective of how the matter is presented in the claims. For example, the requirement for technical contribution cannot be circumvented merely by specifying technical means in the patent claims.
- (13c) Furthermore, a story is inherently non-technical and therefore cannot constitute a technical invention. Nonetheless, a method involving the use of a story might be patentable provided that the method is used to solve a technical problem. However, any patent granted for such a method would not monopolise the story itself or its use in contexts not foreseen in the patent.
- (13d) The scope of the exclusive rights conferred by any patent is defined by the claims, as interpreted with reference to the description and any drawings. Fairy tale-implemented inventions should be claimed at least with reference to either a product such as a book, or to a process carried out in such an apparatus such as showing a movie or influencing decisions. Accordingly, where individual elements of stories are used in contexts which do not involve the realisation of any validly claimed product or process, such use will not constitute patent infringement.

- (14) The legal protection of fairy tale-implemented inventions does not necessitate the creation of a separate body of law in place of the rules of national patent law. The rules of national patent law remain the essential basis for the legal protection of fairy tale-implemented inventions. This Directive simply clarifies the present legal position with a view to securing legal certainty, transparency, and clarity of the law and avoiding any drift towards the patentability of unpatentable methods such as obvious or non-technical procedures and business methods.
- (15) This Directive should be limited to laying down certain principles as they apply to the patentability of such inventions, such principles being intended in particular to ensure that inventions which belong to a field of technology and make a technical contribution are susceptible of protection, and conversely to ensure that those inventions which do not make a technical contribution are not so susceptible.
- (16) The competitive position of European industry in relation to its major trading partners will be improved if the current differences in the legal protection of fairy tale-implemented inventions are eliminated and the legal situation is transparent. With the present trend for traditional manufacturing industry to shift their operations to low-cost economies outside the European Union, the importance of intellectual property protection and in particular patent protection is self-evident.
- (17) Since the objectives of the proposed action, namely to harmonise national rules on fairy tale-implemented inventions, cannot be sufficiently achieved by the Member States and can therefore, by reason of the scale or effects of the action, be better achieved at Community level, the Community may adopt measures, in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty. In accordance with the principle of proportionality, as set out in that Article, this Directive does not go beyond what is necessary to achieve those objectives.

HAVE ADOPTED THIS DIRECTIVE:

Article 1

Scope

This Directive lays down rules for the patentability of fairy tale-implemented inventions.

Article 2

Definitions

For the purposes of this Directive the following definitions shall apply:

- (a) “fairy tale-implemented invention” means any invention the performance of which involves the use of a book, cinema or other story telling apparatus, the invention having one or more features which are realised wholly or partly by means of a fairy tale or fairy tales;
- (b) “technical contribution” means a contribution to the state of the art in a field of technology which is new and not obvious to a person skilled in the art. The technical contribution shall be assessed by consideration of the difference between the state of the art and the scope of the patent claim considered as a whole, which must comprise technical features, irrespective of whether or not these are accompanied by non-technical features.

Article 3

fairy tale-implemented inventions as a field of technology

- Deleted -

Article 4

Conditions for patentability

In order to be patentable, a fairy tale-implemented invention must be susceptible of industrial application and new and involve an inventive step. In order to involve an inventive step, a fairy tale-implemented invention must make a technical contribution.

Article 4a

Exclusions from patentability

1. A fairy tale as such cannot constitute a patentable invention.
2. A fairy tale-implemented invention shall not be regarded as making a technical contribution merely because it involves the use of a book, cinema or other story telling apparatus. Accordingly, inventions involving fairy tales, whether expressed as story, in pictures or in any other form, which implement business, political or other methods and do not produce any technical effects beyond the normal physical interactions between a fairy tale and the book, a film or other story telling apparatus in which it is run shall not be patentable.

Article 5

Form of claims

1. Member States shall ensure that a fairy tale-implemented invention may be claimed as a product, that is as a book, a film or other story telling apparatus, or as a process carried out by such a book, film or apparatus through the telling of the fairy tale.
2. A claim to a story, either on its own or on a carrier, shall not be allowed unless that program would, when told by a book, film or other story telling apparatus, put into force a product or process claimed in the same patent application in accordance with paragraph 1.

Article 6

1. Monitoring

The Commission shall monitor the impact of fairy tale-implemented inventions on innovation and competition, both within Europe and internationally, and on European businesses, especially small and medium-sized enterprises, and electronic commerce.

Article 7

Report on the effects of the Directive

The Commission shall report to the European Parliament and the Council by [DATE (*three years from the date specified in Article 8(1)*)] at the latest on

- (a) the impact of patents for fairy tale-implemented inventions on the factors referred in Article 6;
- (b) whether the rules governing the term of the patent and the determination of the patentability requirements, and more specifically novelty, inventive step and the proper scope of claims, are adequate, and whether it would be desirable and legally possible having regard to the Community's international obligations to make modifications to such rules;
- (c) whether difficulties have been experienced in respect of Member States where the requirements of novelty and inventive step are not examined prior to issuance of a patent, and if so, whether any steps are desirable to address such difficulties;
- (ca) whether difficulties have been experienced in respect of the relationship between the protection by patent of fairy tale-implemented inventions and the protection by copyright of stories as provided for in Directive 91/250/EEC and whether any abuse of the patent system has occurred in relation to fairy tale-implemented inventions;
- (cb) how the requirements of this Directive have been taken into account in the practice of the European Patent Office and in its examination guidelines;
- (cc) the aspects in respect of which it may be necessary to prepare for a diplomatic conference to revise the European Patent Convention;

Article 7a

In the light of the monitoring carried out pursuant to Article 8 and the report to be drawn up pursuant to Article 8, the Commission shall review the impact of this Directive and, where necessary, submit proposals for amending legislation to the European Parliament and the Council.

Article 8

Implementation

1. Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive by ... (twenty-four months from its entry into force) at the latest. They shall forthwith inform the Commission thereof.
When Member States adopt those provisions, they shall contain a reference to this Directive or shall be accompanied by such a reference on the occasion of their official publication.
Member States shall determine how such reference is to be made.
2. Member States shall communicate to the Commission the text of the provisions of national law which they adopt in the field covered by this Directive

Article 9

Entry into force

This Directive shall enter into force on the twentieth day following that of its publication in the *Official Journal of the European Communities*.

Article 10

Addressees

This Directive is addressed to the Member States.
